The Answer

HOW TO BEAUTIFY YOUR SHRUBBERY

Simple, easy and effective spraying

Spray all your shrubs and shade trees which drop their foliage in winter, with Scalecide 1 to 15.

Scalecide kills scale and other pests which ruin your rose bushes, lilacs and shade trees. Scalecide builds up the vigor and vitality of your trees and shrubs, making them more beautiful and more resistant to winter cold and summer drouth. On evergreens, for scale, spruce gall, bud moth, etc., use Scalecide 1 to 20 or 25 just before the new growth starts in the late Spring. Spray with Scalecide and be sure!

MAKE YOUR FRUIT TREES PRODUCTIVE

Here's an easy way

Spray all fruit trees, grape vines, berry bushes, etc. with Scalecide 1 to 15. Spray any time the temperature is warmer than 40 degrees, after the foliage is off in the Fall until the green tips of the buds actually begin to show in the Spring.

Scalecide invigorates as it protects!

Scalecide controls aphids, red mite and many other pests of apples, peaches, pears, etc. Scalecide kills many over-wintering codling moth larvae, and aids in cleaning up cankers. The year after year use of Scalecide invigorates the trees. Scalecide is guaranteed to make a better orchard than lime-sulphur or your money back. No other spray does all this. Scalecide costs less because it does more. Let Scalecide be your dormant spray. Qt. can 75c; gal. \$1.75; 5 gals. \$6.35; 15 gals. \$14.95. F.O.B. Baltimore.

Cauliflowers delight in a rich, moist soil, and in dry seasons should be abundantly watered, especially when heading. Set the plants in the field 15x24 inches apart.

CELTUCE

Celtuce belongs to the lettuce family but is entirely different in its growth and uses. The young leaves may be eaten as a salad, but its chief value is its central stem or stalk.

Whether Celtuce stalks are to be eaten raw or cooked, you must first remove all the outer skin and fibrous layers down to where they become light green and tender. As a raw vegetable, cut the stalks into 4- or 5-inch lengths and split lengthwise; chill and eat as you would celery or carrots, with salt or mayonnaise.

Cooked Celtuce stalks are pale green, attractive in appearance, and have a pleasing, mild flavor.

Celtuce is easy to grow in the home garden and is well adapted for market and shipping. Plants grow quickly, forming a rosette of light green leaves which may be used, when young, as "greens." In less than 90 days after seed is sown, the central stem or stalk is usable and will be found most tender at this age. The stalks are solid throughout, the skin greenish white and tough but the inside is very succulent, most delicate pale green, crisp and brittle. Make first sowing of seed as soon as ground can be worked in the spring. Succession sowing at intervals of a week or ten days will give a continuous supply. Grow Celtuce—it is new, it is good, it is interesting and it is healthful; the best new vegetable for 1943.

SEED POTATOES

Maine-Grown

CULTURE—Potatoes do particularly well on sod ground or pasture land, where the turf has been freshly turned. Tubers are usually cut into two-eyed pieces; plant in April in furrows of good depth about 3 feet apart. Scatter a liberal quantity of manure or fertilizer along the drill, and set the seed from 10 inches to a foot apart in the row. Cover with 4 inches of soil, and cultivate frequently after the plants are up. Plant late crop July 1st to August 1st. Eight to 10 bushels will plant an acre.

We can supply the two new varieties of Potatoes: Chippewa for early, and Katahdin for later. Both varieties have unusual merits, and were originated by U. S. Dept. of Agriculture. Write for prices.

We are not quoting prices in our catalog. When ready to plant, write us, and we will then quote you the very lowest prices consistent with the quality of our seed stock.

The Complete Secret of Hand Beauty

Ladies KREME SKIN Gloves serve a two-fold purpose. They both protect and beautify the hands.

Worn for work or play, their exquisitely soft, CREME TREATED, imported lambskin not only protects your hands from dirt, scuffing, bruises and

stains, but while giving this needed protection, the natural "play" of the cream treated leather over the hands MAS-SAGES, SOFTENS AND WHITENS THE SKIN.

This cream treatment is a basic part of the leather, is permanent and does not diminish with use or washing of the gloves.

Attractively packed in individual boxes. Sizes: small, medium and large. Price: \$1.00 per pair; postpaid \$1.10.

This seed will produce a green, smooth, deep-rooted, velvety sod with a thick bottom, free from the common grasses which produce clumps and knots on the lawn. It is used extensively on the finest estates to produce those exquisitely smooth, rich green sweeps of lawn which are so much admired. Lb. 35c; 3 lbs. \$1.00; 5 lbs. \$1.50; 20 lbs. \$5.75; 100 lbs. \$27.00. Delivered free in United States by parcel post, freight, or express, our option.

LAWN GRASSES should be used at the rate of one pound to 200 square feet, 100 lbs. per acre. Very much better results can be had from lawn seeding if it is done early in the spring just as soon as the soil can be conditioned, so as to allow ample time for development of a healthy root growth that will survive summer heat. **DO NOT** expect to have a good lawn on poor worn out soil. You must use lawn food.
